

**Transgenic Organisms Gr.1 and 2**

Tuesday 9:30-12:00 @ KMB318(Group1)

Thursday 13:00-16:00 @ A-2024(Group2)

Instructor: Assist.Prof.Dr. Alper Yilmaz

Email: [alyilmaz@yildiz.edu.tr](mailto:alyilmaz@yildiz.edu.tr)

Office Hours: by appointment

<http://yarbis.yildiz.edu.tr/alyilmaz/course/viewCourse/id/6399>

**Course Goals**

In this course, you will:

1. Comprehend the importance of cloning strategies for generating various types of vector.
2. Learn that stable integration of foreign DNA into host genome is possible via viral vectors.
3. Learn the concept of knock-out where a region is deleted from genome in all cell in an organism.
4. Discuss the advantages and disadvantages of GMO products.

**Course Materials**

There's no set textbook for this course. Students are expected to follow the lecture through handouts.

Lecture notes are handed in copy center across our department. PDF versions of lecture slides can be downloaded from [YARBIS page](#).

Lecture notes contain mostly pics with sparse text, thus you need to listen the instructor and take notes.

**Grading**

Midterm and Final results are announced at "YARBIS Announcements" page, if you think there's mistake or problem with your score please contact the instructor in order to go over your exam results. At the end of the semester, all your exam scores and total score will be published along with letter ranges. If your total score is very close to boundary please contact the instructor and he would try to help in that matter.

Your grade will come from the following sources:

- Midterm: 35%
- Final: 40%
- Quiz: 10%
- Debate: 10%
- Attendance: 5%

There will be 3 quizzes and highest 2 scores will be considered. If you attend all lectures or miss only one lecture then you'll get 5 points for attendance. For every 1-2 lectures missed you'll lose 1 point.

For the debate, each student will pick a side (for or against GMO) and defend his/her position individually with **scientific articles**. Also, a short report of the findings should be handed in to instructor.

## Communication

I'm trying to respond emails as quickly as possible. If you don't get a response within 1-2 days please don't hesitate to send a reminder email.

The changes pertaining to exam date, time and assignment due dates should be decided in class after discussing with everybody. Please don't ask for changes individually, otherwise notification of whole class becomes a hassle.

## Manners

Since you're considered adult, it's your responsibility and decision to listen to the class or not. You can either pay attention and participate in class OR pay no attention and be busy with your cellphone or homework or lab report of another course. Your poor decision should be affecting only you. If you start and keep talking during class, keep instructor and classmates distracted then it will be regarded as an **insult** and acted accordingly.

## Schedule

Below is the tentative schedule for the course. Depending on the speed we go through topics there might be shifts in the schedule. For each week, first date is for Group 1 and second date is for Group 2. **NOTE** : The midterm date is just a forecast, so **the midterm will take place on the date and time the department announces**.

**February 21/23. Introduction**

Introduction to cloning strategies.

**February 28/ March 2. Cloning (cont'd) and cDNA libraries****March 7/9. Viral Vectors**

Since we learned cloning strategies, let's build a viral vector

**March 14/16. Lentiviral vectors**

Special type of viral vectors using Retrovirus genomes

**March 21/23. Knock-out mice**

How to delete or insert regions from or into genome in whole organism

**March 28/30. In vitro Mutagenesis**

Random or targeted mutations in DNA with a purpose

**April 4/6. Transgenic Applications**

In various model organisms

**April 11/13. Transgenic Applications / Transgenic Animal Classification**

Cont'd from previous week and their classification according to use cases

**(April 18/20). Midterm****April 25/27. Transgenic Applications in Agriculture**

How to generate transgenic plants and the golden rice story

**May 2/4. Advanced Vectors for Transgenic Plant Production**

Replacing antibiotic resistance gene and non-plant sequences from vectors

**May 9/11. GMO testing**

How to determine if a product is transgenic or not

**May 16/18. Debate**

Let's see advantages and disadvantages of GMO products

**May 23/25. Bioengineering Meeting**

TBD

**May 30/ June 1. Final Lecture**

TBD
