

## Virology

Wednesday 13:00-16:00 @ KMB315

Instructor: Assist.Prof.Dr. Alper Yilmaz

Email: [alyilmaz@yildiz.edu.tr](mailto:alyilmaz@yildiz.edu.tr)

Office Hours: by appointment

<http://avesis.yildiz.edu.tr/alyilmaz/dokumanlar>

## Course Goals

In this course, you will:

1. Learn complexity and diversity of viruses.
2. Learn that viruses help understand cellular mechanisms and they excelled at many aspects (e.g. trafficking).
3. Understand that viruses hack the system (i.e. cell) and usually use a workarounds, **even by overriding dogmas**, to tackle with various barriers.

## Course Materials

Course textbook(s) are *Virology: Principles and Applications* by John Carter and Venetia Saunders (2007). In addition we might refer to another book, *Fundamentals of Molecular Virology* by Nicholas Acheson (2011).

Lecture notes are handed in copy center across our department. PDF versions of lecture slides can be downloaded from [AVESIS page](#).

Lecture notes contain mostly pics with sparse text, thus you need to listen the instructor and take notes.

## Grading

Your grade will come from the following sources:

- Midterm: 40%
- Final: 40%
- Quiz: 0%
- Assignment: 10%
- Attendance: 10%

Figure 1: Please read the syllabus

There will be 4 quizzes and 3 highest scores will be considered. If you attend all lectures or miss only one lecture then you'll get 5 points. For every 1-2 lectures missed you'll lose 1 point. **Note:** due to overcrowded classroom, there won't be any quizzes this year.

**Final exam will cover topics discussed after Midterm exam.**

Number and content of assignments will be provided later. The assignments will be related to "applications of a given virus to bioengineering problems".

Midterm and Final results are announced at "AVESIS Announcements" page, if you think there's mistake or problem with your score please contact the instructor in order to go over your exam results. At the end of the semester, all your exam scores and total score will be published along with letter ranges. If your total score is very close to boundary please contact the instructor and he would try to help in that matter.

## Communication

I'm trying to respond emails as quickly as possible. If you don't get a response within 1-2 days please don't hesitate to send a reminder email.

The changes pertaining to exam date, time and assignment due dates should be

decided in class after discussing with everybody. Please don't ask for changes individually, otherwise notification of whole class becomes a hassle.

## **Manners**

Since you're considered adult, it's your responsibility and decision to listen to the class or not. You can either pay attention and participate in class OR pay no attention and be busy with your cellphone or homework or lab report of another course. Your poor decision should be affecting only you. If you start and keep talking during class, keep instructor and classmates distracted then it will be regarded as an **insult** and acted accordingly.

## **Schedule**

Below is the tentative schedule for the course. Depending on the speed we go through topics there might be shifts in the schedule. **NOTE** : The midterm date is just a forecast, so **the midterm will take place on the date and time the department announces.**

### **February 13. Introduction**

Introduction to virology and various fields related to virology. Overview of complexity and diversity of viruses, their genomes and proteins. Main differences between enveloped and non-enveloped viruses.

### **February 20. Methods Used in Virology & Virus Structure**

*Chapter 2 and Chapter 3* in our textbook.

## **Mechanisms**

### **February 27. Attachment, Entry, Translation and Transport**

*Chapter 5 and Chapter 6* in our textbook.

### **March 6. Virus Genome Replication & Assembly and Exit**

*Chapter 7 and Chapter 8* in our textbook.

### **March 13. Classification and Nomenclature of Viruses**

*Chapter 10* in our textbook.

## **Individual Virus Families**

### **March 20. Herpesviruses and Other dsDNA Viruses**

*Chapter 11* in our textbook.

### **March 27. Parvoviruses and Other ssDNA Viruses**

*Chapter 12* in our textbook.

### ***(April 3). Midterm***

### **April 10. Reoviruses and Other dsRNA Viruses**

*Chapter 13* in our textbook.

### **April 17. Picornaviruses and Other Plus-strand RNA Viruses**

*Chapter 14* in our textbook.

### **April 24. Rhabdoviruses and Other Minus-strand RNA Viruses**

*Chapter 15* in our textbook.

### ***May 1. No classes***

*Chapter 16* and *Chapter 17* in our textbook.

### **May 8. Retroviruses & HIV**

*Chapter 16* and *Chapter 17* in our textbook.

### **May 15. Hepadnaviruses and Other Reverse-transcribing DNA Viruses**

*Chapter 18* in our textbook
